

Sepalin

Variety Benefits

- Good piece production
- Single fruited
- Strong laterals
- Uniform fruit quality
- Excellent grading
- Intermediate resistant against CGMMV and PM

Resistance Keys

Cca: *Corynespora cassiicola*
Ccu: *Cladosporium cucumerinum*
CGMMV: Cucumber Green Mottle Mosaic Virus
PM: Powdery Mildew

Cultivation System Traditional, High wire

Season Summer; Autumn

Plant type Strong; Single fruited

Fruit type Long Cucumber

Grading 300+ 8%; 350+ 43%; 400+ 46%; 500+ 3%

High resistant (HR) Cca;Ccu

Intermediate resistant (IR) CGMMV; PM

Plant schedule

I	II	III	IV	V	VI	VII	VIII	IX	X	XI	XII

Description

During the second crop, SEpalin achieves a strong yield thanks to a large number of pieces combined with a high fruit weight. The variety is more likely to experience moderate growth with an average number of leaves up to the wire and an average vine growth. The absence of aborting fruits results in a high production yield. The variety is sufficiently strong against powdery mildew and is resistant to cucumber green mottle mosaic virus. In the second crop, SEpalin achieves a good quality harvest with a good shelf life on both the stem and the vines. The variety has a nicely rounded neck. Its green color is slightly lighter than we are used to but there is a bright and even color over the fruit (Source: *Proeftuinnieuws* March 6, 2020).

Average summer 6 growers

Variety	Pieces/m ²	Kgs/m ²
Standard	69,3	29,7
SEpalin	69,8	29,6
